Michael Carrihill

Full-Stack & Mobile Developer · React · TypeScript · Node · AI
features

Full-stack developer who ships complete products end to end:
React/Next.js and React Native front ends, Node and FastAPI back ends,
PostgreSQL, auth, payments and App Store release. Six apps live on the
App Store, a web shop a real bakery takes orders through, and LLM
features (tool-calling agents, voice, document-to-quiz) running in
production.

6
apps published on the
App Store

12+
products shipped, web ·

5+
products with LLM
features in production

EXPERIENCE

Full-Stack & Mobile Developer (independent) 2024 – present

Own products, published under my own developer accounts

- Designed, built and shipped six App Store apps plus web and desktop products; I run them in production (hosting, databases, releases, support).
- Honey Budget** (App Store + web): React/Vite front end, Node/Express + PostgreSQL/Prisma API on Render, Google sign-in, transactional email, iOS build via Capacitor; AI finance coach that uses tool calling to read and act on the user's budget.
- Awaken** (App Store): React Native/Expo + TypeScript; workouts verified through Apple Health and in-app subscriptions through StoreKit.
- Bread & Butter Archives**: live ordering site for a real bakery (Next.js + Neon PostgreSQL) with pack-size variants, pickup/delivery, KPay payments, an admin panel and iOS web-push.
- Collaborate through shared GitHub repositories: co-developing two Godot games with another developer, and a kids' AI research app with my wife that is in use by students.

Preschool English Teacher Jun 2025 – present

Brainworks International School, Myanmar

- Plan and teach daily English lessons to preschool classes: phonics, vocabulary, songs and early reading.
- Built **Brain Bot**, a voice-based AI learning tool (Ellie answers, Brainy Bot gives clues) used in Brainworks teacher training.
- Produce animated teaching videos for my classes end-to-end — original phonics characters, AI-generated animation, captions, audio.

SELECTED PRODUCTS

Whitz Notes APP STORE + WEB
Upload any PDF and get flashcards, quizzes, mind maps and matching games in seconds.
Next.js · TypeScript · Claude API

Kids' AI research app IN USE BY STUDENTS
Built with my wife: voice question-and-answer that teaches children to research safely with AI. A separate school-branded edition is also in use.

HOW I WORK

Ship the smallest thing that works, put it in front of real users, then iterate on what they actually do. Every product here is live, in use, or in active development — none are tutorials.

AVAILABILITY

Remote contract or full-time. UTC+6:30 overlaps the full working day with Asia-Pacific and mornings with Europe. References on request.

ALSO

Video editing, short-form content and social growth for my own products. Comfortable across Windows, macOS and Linux tooling; run my own VPN and home network.

MORE PRODUCTS

PostFlow AI **WINDOWS DESKTOP**

Social-media autopilot that schedules and posts to Instagram and YouTube through the official APIs on a human-like cadence.

Python · PyQt6 · SQLite · Instagram Graph API · YouTube Data API

PipLog **WEB + IOS**

AI trading journal — log trades by chart upload, voice or plain text; dashboards and a coaching character.

React · Node.js · PostgreSQL

Brain Bot & Morgana **LIVE**

Brain Bot: AI learning assistant for ages 4–7 with two characters.
Morgana: streaming multi-conversation AI chat assistant.

Next.js · Groq · Tailwind · Vercel

Games **APP STORE · STEAM (IN PROGRESS)**

STAX Blocks (Godot), VeilBreak (75 hand-tuned hex-puzzle levels), LifeXP Pixel Edition (SwiftUI habit RPG), Don't Wake Dad (Godot 4 stealth), and a SkyWars-style minigame collection for Steam in development.

Godot / GDScript · Phaser 3 · SwiftUI · StoreKit
